

Foo [bar](#).

Foo [bar](#).

Foo [bar](#).

With [embedded \[brackets\]](#).

Indented [once](#).

Indented [twice](#).

Indented [thrice](#).

Indented [four][] times.

```
[four]: /url
```

---

[this](#) should work

So should [this](#).

And [this](#).

And [this](#).

And [this](#).

But not [that] [].

Nor [that][].

Nor [that].

[Something in brackets like [this](#) should work]

[Same with [this](#).]

In this case, [this](#) points to something else.

Backslashing should suppress [this] and [this].

---

Here's one where the [link breaks](#) across lines.

Here's another where the [link breaks](#) across lines, but with a line-ending space.
